

Press Release

Morgan Schaffer,
8200 St-Patrick Street
Suite 150, LaSalle
Qc, H8N 2H1

Morgan Schaffer released its new multi gas online monitors for oil based transformers at the Doble conference in Boston, March 22, 2010.

We introduced the next generation of Calisto Monitors that are completely interchangeable to fulfill the needs of the evolving condition of your transformer, which will give you a more in depth analysis. Our monitors will also be on display at IEEE in New Orleans, April 19-22, in **booth No.1514**.

The new multi gas products feature; Continuous oil circulation with integral flow monitoring; Precision thermal regulation; Native support of Modbus, DNP3 and (optionally) IEC61850 communications; Extensive analog I/Os and output relays, that are user configurable; CE marking; and Calisto Manager software for Calisto configuration, and tracking a network of Calisto units.

The benefits of the new Calisto products are its exceptional accuracy and reproducibility, its industry-leading measurement ranges and its substation-hardened communications for outstanding isolation and reliability.

For further information on these products please do not hesitate to contact us at info@morganschaffer.com or visit our website at www.morganschaffer.com
